Pozvánka na přednášku

Review of the Security Incidents of 2011
A Traveller's Secret Notes on IT-Security

kterou na MFF UK (Malostranské nám. 25, Praha) přednese

David Jacoby

Senior Security Researcher, Kaspersky Lab

v úterý 10. 4. 2012, 14:00 - 15:00, posluchárna S3

Abstract: As security experts in the industry we travel all over the world, we meet some of the most powerful people and organizations; we talk about advanced technology, malware, threats and predictions… but is this enough? It seems that we try to focus so much on future technology that we forget to learn from past incidents. What actually happened when that major company got compromised? How are we as an industry leader learning from the mistakes of others?

Some of the major hacks and malware outbreaks in 2011 were not due to super sophisticated technology; they were pretty trivial and could quite easily have been prevented. We are also facing problems such as localization, a lack of education & awareness, a weak security mindset and different cultures. I have spoken at conferences all over the world and at every event I take some notes, like a security diary from the different corners of the world.

The talk will not just be a recap of the past year but also an overview of what security threats different regions are facing. What are the problems out there, what are we actually fighting?

David Jacoby is a Senior Security Researcher at Global Research & Analysis Team at Kaspersky Lab. He joined Kaspersky Lab in 2010 as a senior security researcher for the Nordic region. He is also responsible for technical PR activities for the same region, where he acts as a technical spokesperson. He is based in Stockholm, Sweden. David specializes in vulnerability management, penetration tests, vulnerability research with a main focus on alternative systems such as UNIX, Linux. His research focuses on improving awareness of the threats and vulnerabilities to which Internet users are exposed.

Prior to joining Kaspersky Lab, David worked in vulnerability research, penetration testing and vulnerability management. He held the role of senior security researcher, advisor and consultant at TrueSec AB. Before joining TrueSec AB in 2008, David worked for seven years at Outpost24, an automated vulnerability scanning vendor, starting out as chief hacker and rising to vice president for customer experience by the time he left the company.
